Übung 7

Alexander Mattick Kennung: qi69dube

Kapitel 1

18. Juni 2020

1 4

 $\Gamma = \{length: string \rightarrow int, name: person \rightarrow string\}$

$$(AX) \frac{}{(\rightarrow_{e})} \frac{}{\Gamma_{1} \vdash x : person} \frac{}{(AX)} \frac{}{\Gamma_{1} \vdash name : person \rightarrow string}} \frac{}{(AX)} \frac{}{\Gamma_{1} \vdash length : string \rightarrow int}} \frac{}{(\rightarrow_{e})} \frac{}{\Gamma_{1} \vdash name \ x : string} \frac{}{\Gamma_{1} \vdash length(name \ x) : int}} \frac{}{(\rightarrow_{i})} \frac{}{\Gamma_{1}} \frac{}{\Gamma_{1} \vdash length(name \ x) : person \rightarrow int}}$$

2.

$$(AX) \frac{ }{ \begin{array}{c} \hline{\Gamma_2 \vdash y : int} \\ \hline \end{array}} \underbrace{(AX) \frac{ }{ \begin{array}{c} \hline{\Gamma_2 \vdash f : int \rightarrow char \rightarrow string} \\ \hline \\ (\rightarrow_e) \\ \hline \end{array}} \underbrace{(AX) \frac{ }{ \begin{array}{c} \hline{\Gamma_2 \vdash fy : char \rightarrow string} \\ \hline \\ \hline \end{array}} \underbrace{(AX) \frac{ }{ \begin{array}{c} \hline{\Gamma_2 \vdash x : char} \\ \hline \\ \hline \end{array}} \underbrace{ \begin{array}{c} \hline{\Gamma_1[y \mapsto int]} \vdash fyx : string \\ \hline \\ \hline \end{array}}_{ \begin{array}{c} \hline{\Gamma_2} \\ \hline \end{array}} \underbrace{ \begin{array}{c} \hline{\Gamma_1[y \mapsto int]} \vdash \lambda y. fyx : int \rightarrow string \\ \hline \\ \hline \end{array}}_{ \begin{array}{c} \hline{\Gamma_1} \\ \hline \end{array}}_{ \begin{array}{c} \hline{\Gamma_1} \\ \hline \end{array}} \underbrace{ \begin{array}{c} \hline{\Gamma_1} \\ \hline \end{array}}_{ \begin{array}{c} \hline{\Gamma_2} \\ \hline \end{array}} \underbrace{ \begin{array}{c} \hline{\Gamma_1} \\ \hline \end{array}}_{ \begin{array}{c} \hline{\Gamma_2} \\$$

3.

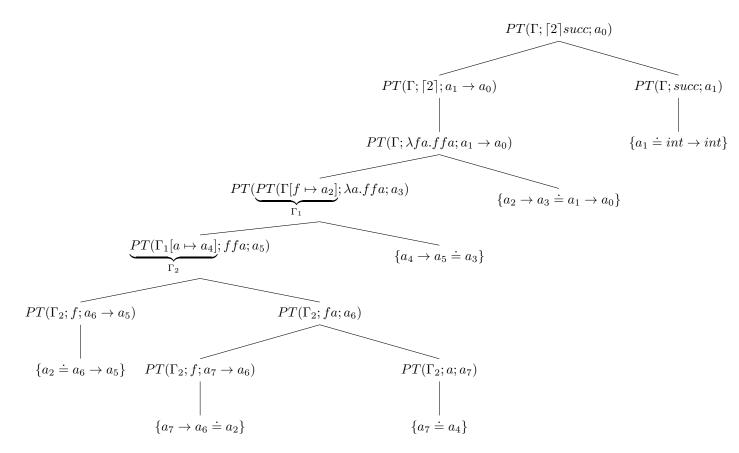

$$(AX) \frac{\Gamma_{2} \vdash y : \alpha}{(\rightarrow_{e})} \frac{(AX) \frac{\Gamma_{2} \vdash f : \alpha \rightarrow \beta \rightarrow \gamma}{\Gamma_{2} \vdash fy : \beta \rightarrow \gamma} \qquad (AX) \frac{\Gamma_{2} \vdash x : \beta}{\Gamma_{2}}$$

$$(\rightarrow_{e}) \frac{\Gamma_{1}[y \mapsto \alpha] \vdash fyx : \gamma}{\underbrace{\Gamma_{1}[x \mapsto \beta] \vdash \lambda y. fyx : \alpha \rightarrow \gamma}}$$

$$(\rightarrow_{i}) \frac{\Gamma_{1}}{\underbrace{\{f : \beta \rightarrow \alpha \rightarrow \gamma\} \vdash \lambda xy. fyx : \beta \rightarrow \alpha \rightarrow \gamma}}$$

$$(\rightarrow_{i}) \frac{\Gamma_{1}}{\vdash \lambda fxy. fyx : (\alpha \rightarrow \beta \rightarrow \gamma) \rightarrow (\beta \rightarrow \alpha \rightarrow \gamma)}$$

Also genau das gleiche Nochmal

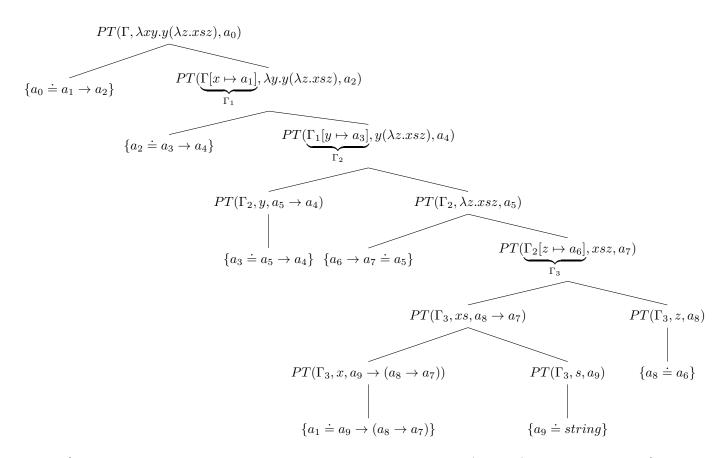

Also zu Unifizierende Menge:

$$\{a_1 \doteq int \to int, a_6 \to a_5 \doteq a_2, a_7 \to a_6 \doteq a_2, a_7 \doteq a_4, a_2 \to a_3 \doteq a_1 \to a_0, a_4 \to a_5 \doteq a_3\}$$

Also ist der Typ von $\{succ: int \rightarrow int\} \vdash \lceil 2 \rceil succ: int \rightarrow int.$

2.

Daraus $\{a_0 \doteq a_1 \rightarrow a_2, a_2 \doteq a_3 \rightarrow a_4, a_3 \doteq a_5 \rightarrow a_4, a_6 \rightarrow a_7 \doteq a_5, a_1 \doteq a_9 \rightarrow (a_8 \rightarrow a_7), a_9 \doteq string, a_8 \doteq a_6\}$ elim: $\{a_0 \doteq (string \rightarrow (a_8 \rightarrow a_7)) \rightarrow (((a_6 \rightarrow a_7) \rightarrow a_4) \rightarrow a_4), a_2 \doteq ((a_6 \rightarrow a_7) \rightarrow a_4) \rightarrow a_4, a_3 \doteq (a_6 \rightarrow a_7) \rightarrow a_4, a_6 \rightarrow a_7 \doteq a_5, a_1 \doteq string \rightarrow (a_8 \rightarrow a_7), a_9 \doteq string, a_8 \doteq a_6\}$ elim: $\{a_0 \doteq (string \rightarrow (a_6 \rightarrow a_7)) \rightarrow (((a_6 \rightarrow a_7) \rightarrow a_4) \rightarrow a_4), a_2 \doteq ((a_6 \rightarrow a_7) \rightarrow a_4) \rightarrow a_4, a_3 \doteq (a_6 \rightarrow a_7) \rightarrow a_4, a_6 \rightarrow a_7 \doteq a_5, a_1 \doteq string \rightarrow (string \rightarrow a_7), a_9 \doteq string, a_8 \doteq a_6\}$ Also $\Gamma \vdash \lambda xy.y(\lambda z.xsz) : (string \rightarrow a_6 \rightarrow a_7) \rightarrow ((a_6 \rightarrow a_7) \rightarrow a_4) \rightarrow a_4$

3 6

- a) $\lambda x.x$
- b) $\lambda f.\lambda x.f$
- c) $\lambda x.\lambda y.\lambda z.y((xz)z)$
- d) $\lambda zy.z(\lambda x.y)$

2.

Curry-Howard: $(p \to p) \to q \to p$ ist logisch nicht gültig.

(bzw wäre semantisch equivalent zu einer funktion, die eine funktion von $p \to p$ entgegennimmt, dann als argument ein q bekommt und wieder ein p herstellt. Es gibt keine Verbindung, um von dem q zu einem benötigten p zu kommen, also ungültig)

3.

a) $\Gamma \vdash \lambda x.xx : \alpha \implies$

$$\begin{split} \alpha &= \gamma \to \beta \ mit \ \Gamma[x \mapsto \gamma] \vdash xx : \beta \implies \\ \alpha &= \gamma \to \beta \ mit \ (\Gamma[x \mapsto \gamma] \vdash x : \xi \to \beta \ und \ \Gamma[x \mapsto \gamma] \vdash x : \xi) \end{split}$$

Widerspruch in $x:\xi \to \beta$ und $x:\xi$ nicht unifizierbar.

$$\{y: char\} \vdash \alpha = \gamma \rightarrow \beta \ mit \ (\{y: char, x: \gamma\} \vdash y: \xi \rightarrow \beta \ und \ \{y: char, x: \gamma\} \vdash x: \xi)$$

Widerspruch in $y:\xi\to\beta$ und y:char, nicht unifizierbar.
